

8 MYTHS ABOUT AIOT

ARTIFICIAL INTELLIGENCE OF THINGS

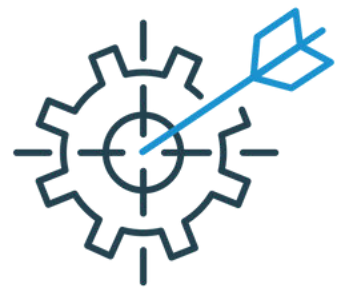

1. AIOT CAN SOLVE EVERYTHING

One common misconception is that AIoT can solve any problem. While it has many applications, it's not a panacea for all challenges.

2. AIOT IS INFALLIBLE

Some people believe that AIoT systems are error-free. In reality, they can make mistakes due to data quality issues and algorithm limitations.

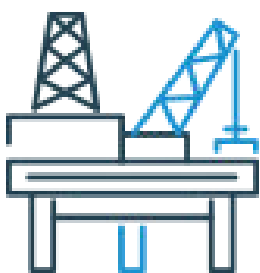

3. DATA PRIVACY ISN'T A CONCERN

Many think that AIoT devices don't pose privacy risks. However, they collect a lot of data, and privacy is a significant concern.

4. AIOT IS ALWAYS EXPENSIVE

It's a myth that AIoT solutions are always costly. There are affordable options and cost-effective ways to implement AIoT.

5. AIOT IS ONLY FOR LARGE ENTERPRISES

Some believe that AIoT is exclusive to big companies. Smaller businesses and individuals can also benefit from AIoT.

6. AIOT WILL REPLACE HUMAN WORKERS

Contrary to the fear that AIoT will lead to widespread job loss, it can also create new job opportunities and augment human capabilities.

7. AIOT ALWAYS REQUIRES A PERMANENT INTERNET CONNECTION

While IoT devices often rely on an internet connection, AIoT can work offline or with intermittent connectivity in some applications.

8. AIOT IS PLUG AND PLAY

Setting up AIoT systems can be complex and may require technical expertise. It's not always as simple as plug-and-play.
